

Primary Pieces

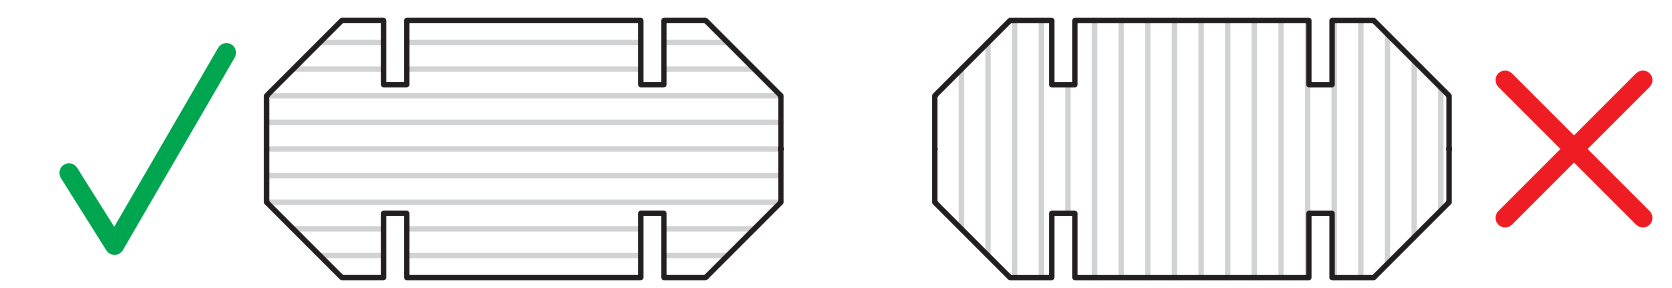

Cardboard Cabin Construction Kit
cardboard-cabin.com

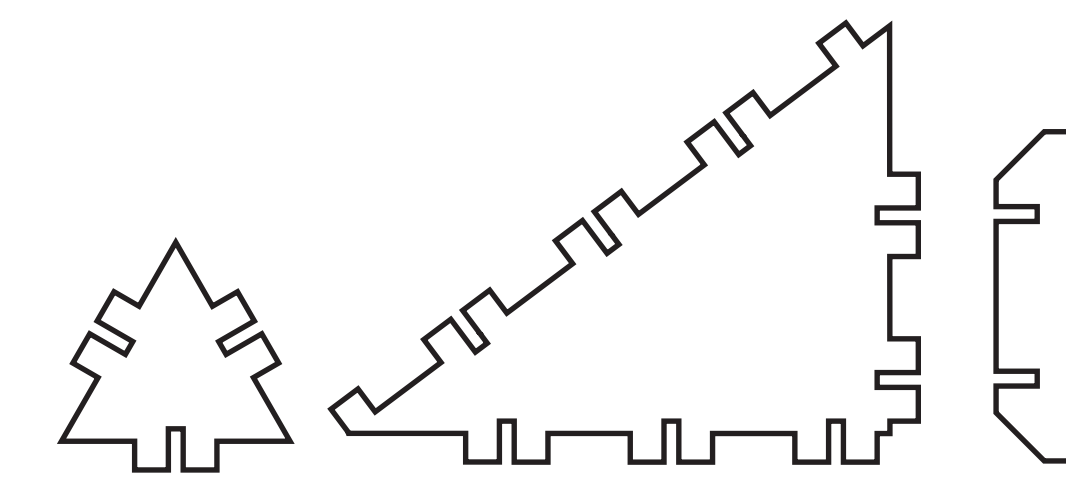

Notes:

These patterns are designed around 3-ply, 5/8" thick cardboard sheets. You'll need to adjust the width of the tabs if you use any other thickness of cardboard.

Corrugations should run perpendicular to the slots (the long way through the planks) for greatest durability.

This page contains patterns for the primary set of pieces you'll need to build structures. You really don't need too many other fancy shapes to build lots of interesting structures, but a few more pieces that make things that are a little more complex and common things like roves easier to build have been included on the following pages.
